# Tempist
Mini 2 Zone

– Quick Start Guide –

1. Plug in the unit with the included micro usb power supply. The Tempist Unit will then create a wifi network that begins with "Tempist-"

3. Search for the new Wi-Fi network named "Tempist" on your laptop, phone, or tablet. The Unit will automatically open a configuration screen.
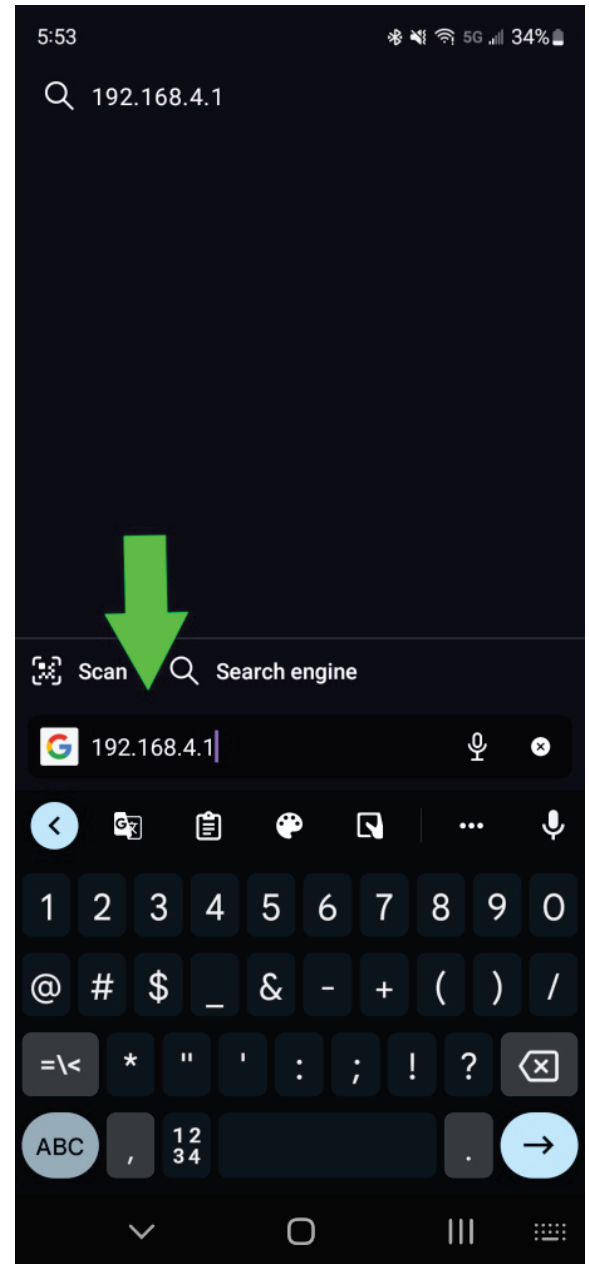

Tempist

Important Note for Older Devices

(If a window does not automatically open after connecting. Use 192.168.4.1 in your browser to connect manually)

5. Click, "Configure WiFi"

1. This is the list of networks that the Tempist Unit can hear.
   The strongest are always listed first.
   Connect to your preferred network.

(2.4ghz only)

7. Enter the password, and hit "Save"

Home Wi-Fi	🔒	64%
	🔒	64%
	🔒	30%

save

Scan

Now your unit has saved your credentials. It will now reboot and always connect when this entered Access point is available

If for some reason this Access Point is not in range in the future, the Tempist mini unit will restart this config screen so you can connect to another Wi-Fi

5:54

Credentials Saved
Trying to connect ESP to network.
If it fails reconnect to AP to try again

– Connecting to TempistHub.com –

1. After connecting to wifi succesfully, open your wifi settings and look for "Tempist Settings".

2. Connect to Tempist Settings

3. A window will appear. at the top of the window your TEMP ID will appear. In the format of TEMP-XXXXXX. Record this ID for the future. This is the permant ID of your unit on the TempistHub Network.

4. Login to www.TempistHub.com

5. Register your account for the first time

6. Enter your TEMP-ID#. This will bond your unit to your email.

7. Purchase a subscription if not included with your unit or boiler.

8. Enjoy! Your unit should now be connected.
